*"The House famous

Lawn Grass Seed"*

The joy of gardening

UCCESS in gardening imparts a mingled feeling of joy and pride to those who put forth untiring efforts to attain it.

But this *success* is dependent upon the *quality* of the Seeds, Bulbs or Plants one purchases, this *quality* again reverting back to the integrity and reputation of the seedsman.

The responsibility of the seedsman is immense. He must earn the confidence of those who buy from him, particularly superintendents and head gardeners of private estates, for they cannot jeopardize their position or reputation as capable men by purchasing stocks from sources of unknown repute. This mutual feeling of confidence between the seedsman and gardener can only be built up through years of faithful service.

For close to a quarter of a century we have provided some of the largest gardens and estates in America with our selected Stocks of Vegetable, Flower and Field Seeds, the products of which have gained Highest Awards in Competitive Horticultural Shows, while our Grass Seeds have earned for us the title of "*The House Famous for Lawn Grass Seed.*"

We are again prepared to make this Gardening year for you a success and joy with our unflinching Standard of Efficiency "Reliable Seeds and Prompt Service."

Burnett's Lawn Grass Seed Mixtures

Lawn View of Private Estate Sown with Burnett's "Special" Lawn Grass Seed Mixture.

Burnett's "Special" Lawn Grass Mixture

The above mixture is made from our own formula, and composed of grasses specially adapted for the purposes of producing turf which retains its rich green color and velvety appearance throughout the entire Summer and Fall. In making up this high grade mixture we are careful to use only the very finest quality of all the most desirable dwarf evergreen, re-cleaned grasses, free from chaff and weeds, which thrive well on any soil, thus ensuring a beautiful and permanent lawn. To obtain best results Lawn Grass Seed should be sown as soon as the ground can be prepared in early Spring. It may also be sown in the Fall with good results.

Quantity Seed Required

For making New Lawns, we recommend sowing at the rate of 125 lbs. to the acre (approximately 6 bushels). Where small quantity is required, sow 1 lb. to each 400 square feet (20' x 20'). For renovating old lawns, use half the quantity.

1 lb. 60c., 2½ lbs. \$1.40, 5 lbs. \$2.75, 10 lbs. \$5.25, 20 lbs. \$10.00, 100 lbs. \$50.00

(20 lbs. of Burnett's "Special Mixture" is approximately one bushel.)

Lawn Remarks

A perfect and enduring lawn, one of velvety appearance with closely interwoven, firm, deep and elastic turf, is only created by sowing a composition of the various kinds of grass seeds suited to the conditions and the climate. Several varieties are needed, that the lawn may be evergreen during all seasons and the seeds must be sown liberally (at the rate of from five to six bushels per acre), not only that a lawn may be produced quickly, but because the kinds of grasses suitable for perfect lawns are fine-leaved and should take entire possession of the ground promptly, thus checking the development of weeds, the seeds of which are in all soils. Good, rich deeply worked soil, either of a friable texture or thoroughly drained, is as necessary for the production of a perfect lawn as for garden crops. Early and frequent mowing and rolling, as well as the liberal application of water, which should be applied in the early morning, or late afternoon during dry seasons, is one of the secrets of maintaining beautiful green turf from early Spring to late Fall.

Prevent and Control BROWN PATCH in your lawn. SEMESAN controls this fungous disease. 2 oz. 50c; 8 oz. \$1.60; 1 lb. \$2.75; 5 lbs. \$13.00.

Burnett's Lawn Grass Seed Mixtures

View of Lawn sown with Burnett's Famous "KILLARNEY" Lawn Grass Seed Mixture.

Burnett's "Killarney" Mixture

Burnett's Lawn Grass Seed Mixture "Killarney" is composed of a combination of the very finest European grasses and fescues, the highest grades possible to procure, and specially adapted for this climate. This mixture is composed of all solid, re-cleaned seeds of the highest germination. Therefore, owners of large estates requiring a permanent sod and everlasting lawn should by all means use this high-grade mixture. If the ground is properly prepared, we are certain "Killarney Mixture" will produce a turf of velvet, equal to the most famous Lawns in Europe. Give it a trial. "Sow Killarney and walk on Velvet."

1 lb. 65c., 2½ lbs. \$1.60, 5 lbs. \$3.00, 12½ lbs. \$7.50, 25 lbs. \$14.00, 100 lbs. \$55.00

(25 lbs. of "Killarney Mixture" is approximately one bushel.)

Burnett's "Central Park" Mixture

This well-known mixture contains a large proportion of permanent grasses that grow quickly, producing a rich, green sward in about four weeks from time of sowing. "Central Park" is very hardy and has always given entire satisfaction in any location wherever sown.

1 lb. 50c., 2½ lbs. \$1.20, 5 lbs. \$2.25, 10 lbs. \$4.25, 20 lbs. \$8.00, 100 lbs. \$40.00

(20 lbs. of "Central Park Mixture" is approximately one bushel.)

Burnett's "Play Ground" Mixture

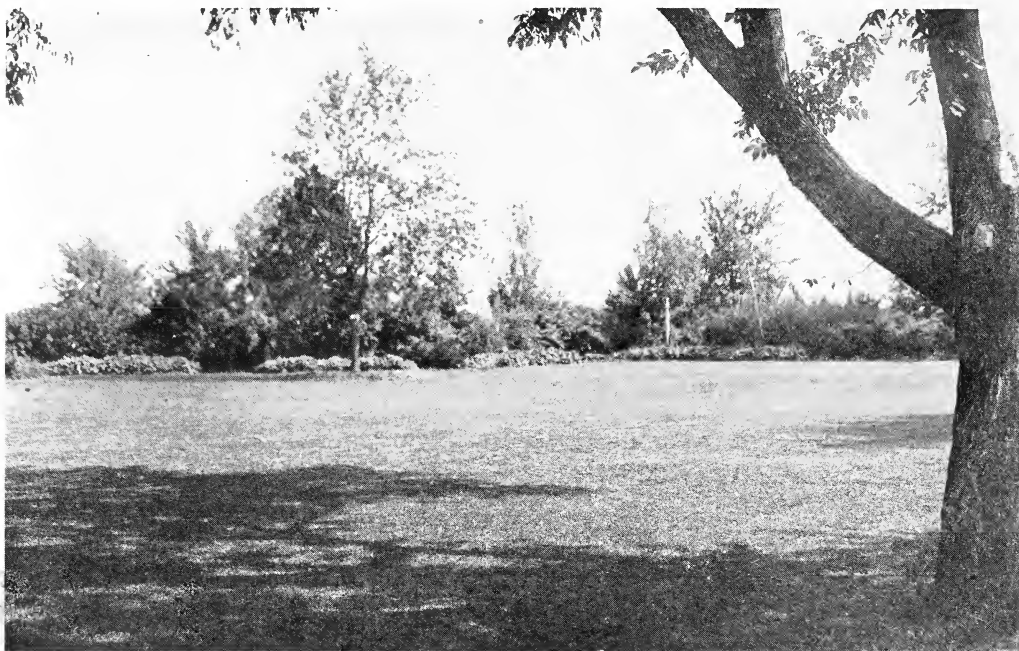

The above mixture is adapted for a strong, hard-wearing turf of the finest texture, and is composed of some of the hardiest grasses, which will produce a close, thick sod and stand hard usage under all conditions. For Play-Grounds or any place where a strong turf is necessary, this mixture cannot be equaled. We recommend sowing separately some white clover with this mixture.

20 lbs. \$9.00, 100 lbs. \$42.00.

(20 lbs. of "Play Ground Mixture" is approximately one bushel.)

Note: To destroy worms in your lawn, use Richards' Imported Worm Powder. (See Page 5).

Burnett's Lawn Grass Seed Mixtures

View showing Lawn sown with Burnett's "SHADY PLACE" Lawn Grass Seed Mixture.

Burnett's "Shady Place" Mixture

When a lawn is much shaded, either in whole or in part, the shaded portions should be sown with Burnett's "Shady Place" Lawn Grass Seed Mixture, which is a combination of fine, dwarf-growing evergreen varieties, which, in their wild or natural state, are to be found growing in the woods or other sheltered or shady places. Under or in the immediate neighborhood of large trees fertilizers should be applied liberally and frequently, for the trees absorb the fertilizer and impoverish the ground. Ground much shaded is very frequently sour, and if the drainage is defective it is apt to be covered with moss. In such cases an application of lime or wood ashes raked in will sweeten the soil, but the moss should be first removed with a sharp steel-toothed rake.

1 lb. 75c., 2½ lbs. \$1.80, 5 lbs. \$3.50, 10 lbs. \$6.50, 20 lbs. \$12.00, 100 lbs. \$55.00

(20 lbs. of Burnett's "Shady Place Mixture" is approximately one bushel.)

Burnett's "Bank and Terrace" Mixture

On sloping banks it is often necessary to use sod, as heavy rains wash the soil off before the grass seed has time to germinate. It is sometimes even necessary, in sodding very steep banks, to use pins eight or ten inches in length to pin the sods in place, to prevent them from being washed down by excessive rains before the grass roots have had time to fasten in the soil. The Terrace mixture which we offer is composed of deep-rooting grasses which, if once established, will hold the soil and prevent washing, and we advise liberal fertilizer and seeding so that the grasses may be quickly established.

1 lb. 60c., 2½ lbs. \$1.40, 5 lbs. \$2.75, 10 lbs. \$5.25, 20 lbs. \$10.00, 100 lbs. \$50.00

(20 lbs. of Burnett's "Bank and Terrace Mixture" is approximately one bushel.)

Burnett's "Seashore" Mixture

If a few inches of top soil is spread over the surface, and well firmed, an application of Burnett's Special "Seashore" Mixture will produce a good lawn in six or eight weeks. An occasional application of pure Sheep Manure during the spring, summer and fall months will increase the strength and color of the grass. Our formula has been thoroughly tested out in various localities. If the soil is exceptionally poor, and it is not possible to apply a layer of top soil, White Clover will help to make the sod thick, and also protect the grass.

1 lb. 50c., 2½ lbs. \$1.20, 5 lbs. \$2.25, 10 lbs. \$4.25, 20 lbs. \$8.00, 100 lbs. \$40.00

(20 lbs. of Burnett's "Seashore Mixture" is approximately one bushel.)

Grass Seeds for Golf Courses, Etc.

We have made a specialty of Fine Grass Seed Mixtures for many years, suitable for Putting Greens and Fair Greens, and are direct importers of the various European grasses and handle largely the domestic varieties necessary for the formation of correct formulas to cope successfully with the many different conditions of soil, location and climate.

Many clubs have experimented with their greens until they have been successful in the combination of a mixture that gives perfect satisfaction in their particular location. In such instances, we will be glad to offer the necessary grasses separate or make a mixture to the required formula.

RICHARDS' WORM POWDER (Imported)

A new and valuable discovery for instantly removing worms from lawns, bowling greens, putting greens, tennis courts and golf links, etc.

Original bags of 112 lbs., each \$12.00

Directions for Use

Use about ½ lb. to the square yard, distributing the powder over the grass as evenly as possible. The next step is to immediately apply the water to wash in the powder.

Non-poisonous to animal and bird life.

Plenty of water should be used, especially during dry weather, as worms are then deeper in the soil.

The use of this worm killer will diminish labor considerably, as far less brushing and rolling will be required to maintain an even, clean surface on the grass.

BURNETT'S GRASSES AND CLOVERS

FOR HAY, MEADOWS AND PERMANENT PASTURES

OUR Permanent Pasture, Hay and Meadow Mixtures are composed of varieties of grasses best adapted for producing an abundant and nutritious food supply for stock. Our formulas are arranged with great care and the mixtures are made to suit the exact location and condition of soil, etc., for which they are needed.

Nothing but the best re-cleaned seeds are used, consequently it does not take so large a quantity per acre as that generally used when poor quality mixtures are sown.

We recommend four bushels to one acre, which may be sown either in the Spring or Fall, with an additional ten pounds of Mixed Clovers sown early in the Spring. When ordering please state whether for high, dry, medium, wet or heavy soil.

This grand Tomato we can confidently say is one of the finest forcing varieties ever offered. The seed has been saved by the grower from perfect fruit only. Westchester Pryde is a cross between Lister's Prolific and Carter's Sunrise, and is of medium size, fruit uniform and perfect in shape, color beautiful rich red, flavor delicious.

Westchester Pryde, while we claim for it to be a forcing variety, has been grown outside the past season with remarkable success, bearing 40 lbs. of fruit to the plant. Trusses from 12 to 24 to the plant and contain from 15 to 40 fruits to each truss, weighing on an average 4 fruits to a pound. We have had this variety on exhibition in our show window the past season and same was admired by all who saw it. Do not fail to grow Westchester Pryde.

For Main Crop and Exhibition
Purposes "Liberty" has No Equal

Liberty Tomato, introduced by us some years ago, still holds undisputed reputation as the best main crop and exhibition variety. The fruit is of a glossy red color, large, perfectly round, uniform in shape, very solid, and meaty, of superb quality with few seeds, and borne in clusters of from ten to twelve perfect fruits. NOVELTIES AND SPECIALTIES IN FLOWER SEEDS

All gardening enthusiasts are more or less interested in something new in the floral world, and for this reason we keep in touch with all new introductions as they appear from year to year. The few novelties and specialties offered below have been selected by us as having a good claim to merit and are well worthy of a trial.

ADONIS ALEPPICA The Syrian Flos Adonis

The news that it is again possible to obtain seeds of this superb summer plant will be universally welcomed.

The plant is pyramid shaped and grows 16 to 20 inches tall, is strongly ramified and produces numerous round flowers measuring about 3 inches across. The color of the flowers is a shining deep dark blood red of greatest brilliancy. It blooms for two months and when the flowers are cut and placed in water they remain fresh for a long time.

The Syrian Flos Adonis is especially suited for brilliantly colored beds and borders.

The seed can be sown either in the open or in cold frames, preferably in the early spring. Pkt. 50c.

ANCHUSA Annual "Blue Bird"

The perennial Anchusa, the "Dropmore variety," is deservedly popular for its lovely bright blue flowers. This esteem has been shared to some extent by the annual Anchusas. This novelty, which grows about 18 inches high, is of compact habit. Flowers are of a vivid indigo blue and of brilliant effect in any scheme for the decoration of beds and borders. Pkt. 50c.

ANEMONE ST. BRIGID "Creagh Castle Strain"

Anemones, especially the St. Brigid variety, have now attained great popularity and we, therefore, welcome the opportunity of introducing this present strain which has originated in the home of St. Brigid Anemones.

The flowers are extremely large and the range of colors exceptional. Pkt. 75c.

AQUILEGIA VULGARIS COM- PACTA ERECTA "Edelweiss"

One of the earliest spring flowers, this charming Aquilegia variety covers its bushes, 16 to 20 inches high, with large erect snow-white blossoms; the very thing in conjunction with the light green foliage for awaking joy in the garden. Pkt. 50c.

DELPHINIUM Hollyhock Flowered "The Wrexham Strain"

This wonderful new strain of Delphiniums is the finest in existence today and has created a rage, both in Europe and America.

The seed we offer is procured by us direct from one of England's foremost growers of this strain. Pkt. \$2.00; 3 pkts. \$5.00.

Meconopsis Baileyi

DAHLIA Coltness "Improved Hybrids"

The annual Single Dahlias are much prized for their light and graceful decorative flowers. These new hybrids with their pastel shades of delicate pinks, mauves and roses and their richer yellow, scarlets and purples will win many new friends. Plants are of dwarf habit and compact, producing great quantities of flowers. Pkt. 50c.

NEW FORCING CALENDULA Sensation (Campfire)

A distinct new type. It is of vigorous growth, the flowers borne on stout stems needing little disbudding. The blooms are flat, and are undoubtedly larger than those of any type previously introduced. Pkt. 25c.

MECONOPSIS BAILEYII "The Blue Poppy"

A perennial Poppy, discovered in Thibet, throwing up strong leafy stems 3 to 4 feet high, terminating in large four-petalled blossoms of a glorious sky-blue shade, placed around a central zone of golden yellow anthers. A remarkable perennial of rare beauty and one of the most valuable plant discoveries in many years. Pkt. 75c.

NOVELTIES & SPECIALTIES—Cont'd

MIGNONETTE**Golden Goliath**

This was introduced as a Novelty from England last year. The flowers are a deep golden yellow in color with spikes of immense size, surpassing both in color and size any variety that has yet been introduced. Pkt. 50c.

PRIMULA OBCONICA**Gigantea Rose Queen**

The largest and most vigorous Primula Obconica in existence. The immense trusses of flowers are freely borne on long stout stems, and are of great size and substance.

The color is of the purest rose, and a tone that we are convinced will be welcomed. Pkt. 75c.

SCABIOSA CAUCASICA**House's Sensational Strain**

Scabiosa Caucasica is now becoming popular for growing under glass, and we prophesy that this strain of hybrids will greatly increase the popularity of Scabiosa Caucasica when it becomes known. Caucasica Hybrids are a great improvement over the Caucasica, being more vigorous with larger and longer stems and larger and heavier petals, which are ruffled and slightly frilled on the edges. In this hybrid strain you will find colors ranging from white to the darkest blue, but the predominating colors are of delicate lilac and mauve. Pkt. 50c.

INCARVILLEA**Variabilis Hybrids**

A new perennial, which, if planted early in the spring, can be handled as an annual. It is valuable as a border plant and produces a good showing of medium-sized, attractive trumpet-shaped flowers the entire summer. The colors range from yellow and white to deep pink. This mixture of hybrid Incarvillea is a result of several years of painstaking hybridizing and we consider it a valuable addition to the perennial border. Pkt. 50c.

STATICE DUMOSA

This very valuable Sea Lavender is a great improvement upon all popular species; it forms densely packed cushions of pure silvery grey flowers. Their stems are stiff and wiry, the panicles are thickly covered with blossoms. Pkt. 75c.

Texas Blue Bell

TEXAS BLUE BELL
(Eustoma Russellianum)

A fine greenhouse plant, which used to be well known, and is again becoming popular. It has rich deep purple flowers with black centres and yellow stamens. Pkt. 25c.

STOCKS**Early Giant Imperial**

GOLDEN ROSE. A rich light rose enhanced by a pleasing golden effect in the shade of each individual floret. Flowers are large, very double and held on long stems. Pkt. 50c.

ANTIQUE COPPER. Rich Hellebore red, overlaid with copper, the whole giving a very pleasing reddish "antique copper" effect. The strain is very double with individual florets, 2 inches in diameter, on long stems. Pkt. 50c.

Burnett's Reliable Flower Seeds

A well planned Old-fashioned Garden

Aid for the Amateur.

One of the most fascinating and economical ways of making a flower garden, is in raising the plants from seed. One sees far too many of those summer gardens of Cannas, Geraniums, Salvias, Coleus, etc., that are more or less characteristic of the order telephoned to the florist round the corner, to "come and fix up the garden"; very effective in their way, but their similarity and frequency are monotonous, and what is more, such gardens are expensive. A few packages of well chosen annual seeds costing but a few cents, give far more enjoyment in the raising, and a much more useful and interesting variety of flowers.

Flowers that can be raised from seed are divided into 7 classes, viz:—

- H. A.—Hardy Annuals.** Seeds sown outdoors where they are to bloom; they die after the first year.
- H. H. A.—Half Hardy Annuals.** Those that are sown under glass in the early Spring and transplanted outdoors in April and May.
- H. B.—Hardy Biennials.** Seeds sown outdoors and bloom the next year; some bloom the first year if sown early.
- H. H. B.—Half Hardy Biennials.** Seed sown one year under glass and planted outdoors the following Spring.
- H. P.—Hardy Perennials.** Seeds sown outdoors one year, bloom the next and each succeeding year without protection.
- H. H. P.—Half Hardy Perennials.** These bloom from seed the second year, but need winter protection thereafter.
- G. P.—Greenhouse Plants.** Tender plants for growing under glass.

Our list of Flower Seeds has again been carefully revised and comprises only the choicest and most select types in their respective classes, which we are certain will give satisfaction.

OUR NEW MODEL

Built for enduring service, our new model has many improved features, both inside and out, designed to eliminate waste of fillers, breakage of eggs or deterioration of the carrier.

METAL EDGE FILLER

The new patented Filler made of cardboard, circular in shape (like an egg), and reinforced with Metal Edges to insure strength, yet retain lightness in weight, is a wonder for safety and durability. It is so constructed that shocks from all sides are absorbed without injuring the Eggs. It is practically Egg-break proof, unless the Egg is cracked before shipping. This new Filler is recognized as a permanent fixture and thereby eliminates the necessity of replacement from time to time, making it both a money and time saver.

New Fillers will not fit our old model Crates.

SIMPLEX WEATHERPROOF GARDEN LABELS

The card is white Celluloid with special writing surface, protected by a transparent Mica cover. Beautifully finished in dark green, baked enamel of neutral shade. SIMPLEX WEATHERPROOF LABELS

Preserve the names of valuable Roses, Dahlias, Gladiolas, Evergreens, and all other plantings you make. Ordinary labels, which come on the plants, roots or bulbs, are soon destroyed by the weather and the names lost, perhaps forever. Simplex Weatherproof Labels are permanent and keep those names for your future enjoyment and that of your friends. The educational value of this for children cannot be over-estimated. Increased knowledge leads to greater interest in the garden. Intimacy with growing things stimulates the love of nature, — one of the finest influences for the young.

SIMPLEX WEATHERPROOF PLANT LABELS WITH COPPER WIRES

Made of white Celluloid with specially prepared marking surface. The writing, done with ordinary lead pencil, is protected by a transparent cover of Mica, and is not affected by the weather. It will last indefinitely but may be instantly erased whenever desired and the Labels used repeatedly, making them very economical. Mica is used for the protecting cover because it is permanent, and it differs from transparent Celluloid, which does not stand up under constant exposure, but soon deteriorates. The white Celluloid, however, on which the writing is done, is impervious to the elements, and will last indefinitely. Indelible pencil or ink should not be used for marking.

Simplex Weatherproof Labels have been in use for more than 12 years. They are highly esteemed by gardeners everywhere. The pencil marking is very distinct,—black lettering in contrast with white Celluloid.

No. 100 D&B Superbilt Duster

Simple—Substantial—Effective

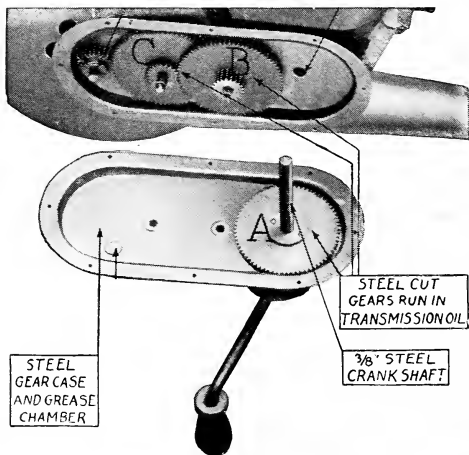

EASY TO OPERATE

Without doubt this is the most simple and easy operating Duster of its kind on the market. Light in weight, well balanced and supported over shoulder

The No. 100 D&B Superbilt Duster is best suited for low-growing crops such as Potatoes, Beans, Tomatoes, Cabbage, Berries, Melons, Tobacco, Cotton, etc. It can also be used effectively on shrubs and small trees.

EASY ACCESS TO PARTS

by heavy web strap.

Dial indicator with graduating figures makes possible quick and accurate adjustment for regulating the flow of powder from hopper. It is possible for operator to set the indicator for any definite amount of dust desired.

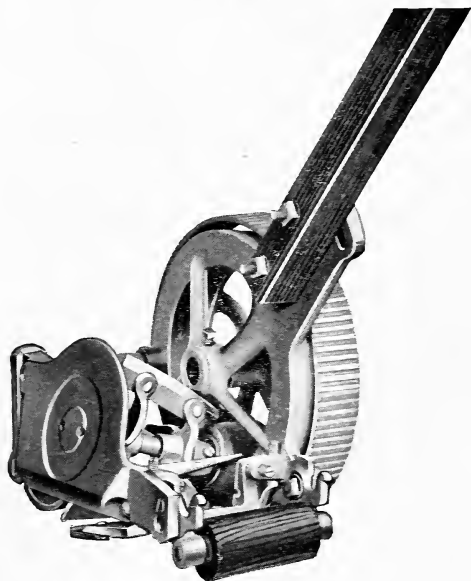

Distributes the dust uniformly. The powerful air blast produced by the fan breaks up the powder into a fine dust cloud, instantly covering all parts of the plant. The agitator and feeding mechanism are made strong enough to break up all hard lumps of powder without injury to any parts of the Duster.

Comes complete with attachments for dusting one or two rows. Elbows, pipes and wide spreading nozzles can be adjusted to direct dust cloud in many directions.

APPROVED BY AGRICULTURAL EXPERIMENT STATIONS.

PENNSYLVANIA UNDERCUT

BB TRIMMER

THE unique construction of the undercut trimmer permits cutting, not only close up to a wall, fence, tree, etc., but it *will get the grass under a fence* or rock-cut base of tombstones, house foundations and other places hitherto out of reach of anything but hand shears. The slanting side plate and conical cylinder make it possible to cut all grass left by the regular style of lawn mower. For cemeteries it has the special advantage of not *marking* or *smudging* the tombstones as the side plate does not come in contact with the stone above the grass line.

It is fitted with the STAYTITE HANDLE, with adjustable steel clamps to take up any possible shrinkage.

BURNETT'S BEAUTIFUL PANSIES

The Pansy is undoubtedly the general favorite of all early Spring flowering plants, and no garden is complete without them. The finest blooms are obtained by sowing the seed in July or August, giving the plants protection during Winter, when they will bloom profusely the following Spring and Summer.

This magnificent monster-flowering strain of Pansies is the most remarkable in existence, not only in size, but in the wonderful variety of rich and brilliant colorings. The flowers are splendidly formed and of a beautiful velvety texture. The selection is the result of many years' devoted attention on behalf of this favorite flower by one of the most famous Scottish growers, and will be found by all who grow it to surpass all other strains in every respect. ¼ oz. \$4.00, ½ oz. \$2.50, Pkt. 75c.

HORTICULTURAL TOOLS and SUNDRIES

DURING our many years in the seed business, we have been called upon from time to time to procure for some of our many customers, certain British-made Horticultural Sundries, to which they had grown accustomed since their apprenticeship.

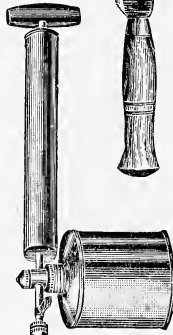

These many requests have resulted in this array of tools illustrated above.

For the convenience of our patrons, we have standardized these implements and offer them in addition to our regular high grade American made goods, as a feature of Burnett Brothers.
